

About the Slide Set

The Collection

A set of thirty-six 35-mm slides has been assembled to complement the activities in this book *Exploring the Moon*. Each slide is accompanied by detailed captions. Topics include what we knew about the Moon from telescopic and other astronomic observations before Apollo, Apollo missions, astronaut activities on the lunar surface, the Highlands, the Maria, how the Moon formed, and exciting ideas for future explorations.

How to Obtain a Copy

It is easy to obtain a copy of the slides. They are available from the Central Operation of Resources for Educators (CORE) in Ohio or from NASA Educator Resource Centers. Phone calls are welcome if you are unable to visit the Educator Resource Center that serves your geographic area. Please refer to Page 146 in this book for addresses and phone numbers for CORE and Educator Resource Centers.
